Yes, but I think the title is a little bit misleading :) In a nutshell, a surgeon and a widower with a son have to shed issues of the past to find each other.It's a story about givers and takers, and about people who concentrate obsessively on one thing or the other in order not to have to deal with/overcome the past.The narration style is easygoing and fluid, and never gets boring, and despite their slightly less than normal professions, you could identify with the protagonists and their problems and the difficult path to overcome these problems and change their habits and ways of dealing with people.Overall, I quite liked this book. It may not have been one of those that keep you glued to it and makes you miss your bedtime, but the plot is interesting enough to keep you reading and find out if there is a happy ending or not ;)
