Interesting plot; too much dialogue  
Von Ein Kunde  
After I read the two first robot novels by Asimov - "The Caves of Steel" and "The Naked Sun" - and liked them so much it was with great delight that I started reading this third novel. It was also because I knew that it was written 30 years after the first two and that Asimov had begun to link his Foundation, Empire and Robot novels together. Elijah Baley, our hero from the first two novels, is again required to investigate a murder. This time he has to travel to the Spacer world Aurora. But the murder is not an ordinary one. It is a humanoid robot that has been murdered and the prime suspect is the robot's creator who by coincidence is also the only roboticist on Aurora who prefers Earth to colonize the galaxy instead of the Spacers. Baley is on this mission again accompanied by his robot friend R. Daneel Olivaw - the now only existing humanoid robot - and a new robot Giskard who apparently possesses some extraordinary powers. The story takes place during the 3 days when Baley is on Aurora. But unfortunately like so many other of Asimov's later novels most of it consists of dialogue. It can be interesting enough at times but sometimes you feel that the characters are discussing the same matter over and over again. It can be pretty trivial and actually caused that it took me quite a while to read through this one as it did not catch my attention as much as it might had, had there been more action and a little less dialogue. Of course I know that action is not something that Asimov is famous of but then again too much dialogue should not be it either. But the mystery part of the novel and the scope of the story is interesting enough. Just too bad that he spend so much time on unimportant dialogue

Von MDWell, here it is: the final robots mystery starring Baley and Daneel. Personally, I think this falls to second or third place in the trilogy, with The Naked Sun as first place. This is in no way a knock of the book, mind you. This book's plot is more involved, making the mystery aspect even tougher to solve. I had thought of the solution, but never given it any thought. This novel takes place on Aurora, the main Spacer world. Its a pleasant mix--not population saturated like Earth, but not robot city like Solaria. My only sort of complaint--sometimes it seemed a bit too long. However, when I finished it, I wished it was longer. Go figure. Now that this novel is done, and Baley has solved his final case, there is only one place to go-- Robots and Empire

Von Ein Kunde  
My god, the man has more masterpieces than most have novels period. Robots of Dawn once again follows Earthman detective Lije Bailey and his humaniform robot partner R. Daneel Olivaw this time on a case about the deactivation of a beloved robot of an old acquaintance of theirs from Solaria (ref. The Naked Sun). With the massively majestic and awe-inspiring capital Spacer world of Aurora, (world of the dawn), as the backdrop, Asimov once again shows not only his talent for the creation of stunning backgrounds but also his profound understanding of humanity in general as well as individual people. You must read this.

Kurzbeschreibung  
A millennium into the future two advances have altered the course of human history: the colonization of the Galaxy and the creation of the positronic brain. Isaac Asimov's Robot novels chronicle the unlikely partnership between a New York City detective and a humanoid robot who must learn to work together. Detective Elijah Baiey is called to the Spacer world Aurora to solve a bizarre case of roboticide. The prime suspect is a gifted roboticist who had the means, the motive, and the opportunity to commit the crime. There's only one catch: Baley and his positronic partner, R. Daneel Olivaw, must prove the man innocent. For in a case of political intrigue and love between woman and robot gone tragically wrong, there's more at stake than simple justice. This time Baley's career, his life, and Earth's right to pioneer the Galaxy lie in the delicate balance.
